Remote APC

Airborne Particle Counter - Remote

The remote APC offers precise flow control through two configurations: an external blower unit with an integrated flow meter for independent, high-accuracy sampling, or a central vacuum pump with a restriction orifice. This flexible setup is ideal for distributed monitoring in large-scale cleanrooms.

Optimized for continuous particle monitoring, the system is well-suited for production environments in industries such as electronics manufacturing, pharmaceuticals, and medical devices. Its modular architecture enables rapid deployment and ensures compatibility with multiple communication protocols, making it the go-to solution for cleanroom environments that demand exceptional performance and compliance.
